

DATA SHEET

SSIS INTEGRATION TOOLKIT

The **SSIS Integration Toolkit** is the industry's most comprehensive integration solution for Microsoft SQL Server Integration Services (SSIS). It delivers a powerful library of 400+ advanced components designed to connect enterprise applications, cloud services, databases, and files with exceptional performance and reliability. Built to extend the native capabilities of SSIS, the toolkit enables organizations to design and manage complex data integration workflows without writing custom code.

Key Features

- 400+ advanced SSIS components designed to extend and enhance native SSIS capabilities
- Connectivity to 200+ enterprise applications, cloud services, and data platforms
- Codeless integration development that eliminates the need for custom scripting
- Unified SSIS platform replacing multiple standalone integration toolkits
- Optimized for high-performance, enterprise-scale data integration
- Consistent user interface and familiar SSIS design experience for faster development

Technical Requirements: Azure SQL, Microsoft SQL Server 2025, 2022, 2019, 2017, 2016, or 2014.

Major Enterprise Applications

Microsoft Dynamics 365

Connectivity for the Microsoft Dynamics ecosystem, supporting Microsoft Dynamics 365 Customer Engagement, Finance and Operations, Business Central, and Microsoft Dataverse, as well as legacy Dynamics platforms including AX, CRM, and NAV. Dedicated Connection Manager, Source, and Destination components enable working with Dynamics and Dataverse data within SSIS packages.

- Advanced FetchXML query support for complex data retrieval and incremental synchronization
- Robust upsert and matching strategies using primary keys, alternate keys, duplicate detection, or custom fields
- Native support for many-to-many relationships without requiring custom development
- OptionSet mapping and service lookup components that simplify value translation and record matching
- Multithreaded processing support for high-volume Dynamics data integration scenarios

HubSpot

Integration with HubSpot CRM and marketing platforms, enabling customer and marketing data synchronization across enterprise systems. Dedicated Connection Manager, Source, and Destination components support working with HubSpot data within SSIS packages.

- Built-in lookup capabilities for referencing HubSpot records during integration processes
- Flexible write operations, including Create, Update, Delete, and Upsert for HubSpot records
- Support for CRM and marketing data synchronization, enabling HubSpot data to participate in broader enterprise integration

NetSuite

Connectivity for NetSuite ERP systems using dedicated Connection Manager, Source, and Destination components for accessing and managing NetSuite data within SSIS workflows.

- Premium Service Lookup support for referencing NetSuite records during data processing
- Web service-based connectivity for retrieving and writing NetSuite data
- Support for working with NetSuite business objects within SSIS workflows

QuickBooks

Designed for both QuickBooks Online and QuickBooks Desktop, the toolkit includes dedicated Connection Manager, Source, and Destination components to support accounting data movement, synchronization, and migration scenarios within SSIS workflows.

- QuickBooks Desktop Gateway support for connecting to on-premises QuickBooks Desktop environments
- Change Data Capture (CDC) for incremental accounting data extraction
- Flexible entity-based and query-based data retrieval for accessing QuickBooks records
- Support for Online and Desktop-specific write actions

Salesforce

Comprehensive support for the Salesforce ecosystem includes dedicated Connection Manager, Source, and Destination components for Salesforce and Salesforce Marketing Cloud, along with a specialized Salesforce Wave Destination component for Tableau CRM and Wave Analytics workflows.

- BULK API support for high-volume Salesforce data processing
- REST API connectivity for modern Salesforce integration workflows
- Option value mapping and advanced lookup capabilities
- Support for Salesforce Marketing Cloud and Tableau CRM / Wave Analytics integration

SAP

Connectivity for SAP systems is provided through dedicated Connection Manager, Table Source, and RFC Destination components, enabling SSIS packages to retrieve and write SAP data as part of broader enterprise integration workflows.

- Structured SAP data extraction using the SAP Table Source component
- RFC-based operations for executing SAP updates and transactions
- Direct interaction with SAP tables within SSIS workflows
- Separate source and destination components for SAP table reads and RFC-based write operations

Microsoft SharePoint

Support for Microsoft SharePoint enables SSIS packages to read and write SharePoint lists and document libraries using dedicated Connection Manager, Source, and Destination components for SharePoint Online and on-premises environments.

- Connect to SharePoint using REST or SOAP endpoints with Active Directory or OAuth authentication
- Retrieve list and document library data with support for filtering, attachments, and document version history
- Document management operations including CheckIn, CheckOut, and folder creation

More Enterprise Applications

Directory Services

Integration with Active Directory, LDAP-based directory services, and Google Directory environments for managing directory objects.

Marketo

Support for integrating marketing automation data, including leads and activity records, using dedicated SSIS components.

Microsoft Dynamics GP

Direct connectivity to Dynamics GP SQL databases for financial and operational data integration.

Microsoft Dynamics SL

Integration with Dynamics SL web services for exchanging enterprise application data.

Microsoft Project Server

Support for integrating project, task, resource, and timesheet data within SSIS workflows.

Oracle CRM On Demand

Connectivity for retrieving and writing CRM data using Oracle CRM On Demand web service APIs.

Oracle Marketing Cloud

Integration for marketing, contact, and activity data using Oracle Marketing Cloud APIs.

Azure DevOps (Team Foundation Server)

Integration with development project data, including work items, using REST or SOAP APIs.

Premium Data Flow Components

Premium ADO.NET

Premium ADO.NET Source offers greater metadata handling and additional features to read from virtually any database.

Premium ADO.NET Destination enables writing to a database with Insert, Update, Delete or Upsert write actions as well as many other additional features.

Premium ADO.NET Command Task run commands to a database instance directly at control flow level.

Premium Aggregate

Perform an aggregate operation on the input columns, and group them to a data set.

Premium Conversion

A transformation component that can be used to convert or make changes to the data type of input columns.

Premium Derived Column

Expands on the functionality of the standard SSIS Derived Column to include over 225 functions and an advanced expression editor.

Premium Excel

Includes enhanced Excel **Connection Manager, Source & Destination** components. Supports both 32 and 64-bit runtimes with greater flexibility when reading and writing to an Excel file.

Premium Lookup

Combines the functionality of the out-of-box Lookup and Fuzzy Lookup components into one simplified, easy-to-use component without any limitations, including the ability to use any data input as the lookup source.

Premium OData

Includes enhanced Excel **Connection Manager, Source & Destination** components. Supports both 32 and 64-bit runtimes with greater flexibility when reading and writing to a Premium OData file.

Premium PDF Source

Reads data from PDF files and converts it into a structured data flow. Supports extracting tabular and text-based data from PDF documents for further processing in SSIS.

Premium Recordset Source

Reads data from an in-memory ADO or ADO.NET recordset and outputs it to the data flow pipeline, enabling previously stored results to be reused in SSIS transformations.

Premium Service Lookup

Search for rows in a lookup object based on fields from rows in a primary input, and perform a lookup against data sources.

Premium Slowly Changing Dimension

An enhanced version of the standard Slowly Changing Dimension component can process three types of slowly changing dimensions: Fixed Attributes, Changing Attributes, and Historical Attributes.

Premium SQL Server

Includes enhanced SQL Server **Connection Manager, Source & Destination** components with greater flexibility when reading from and writing to a SQL Server database.

Premium Task Components

Premium Expression Task

Evaluate an expression and assign the result to a variable during runtime.

Premium File Properties Task

Read and update the properties of a file from a path.

Premium File Watcher Task

Monitor a folder based on a condition, if required, and trigger/write to output based on any change.

Premium SQL Server Command Task

Executes SQL statements or stored procedures against a SQL Server database within the SSIS control flow.

Big Data

CDM

Includes **Source & Destination** components to facilitate reading and writing from CDM data.

EDI

Includes **Source & Destination** components to retrieve data from an EDI file, supports 1000s of different EDI format and version types, such as **HL7, X12, EDIFACT, EANCOM, VDA, HIPPA, Telco** and **NCPDP Script**.

Hadoop Connection Manager

Used to establish a connection to Hadoop from within SSIS.

HDFS

Includes **Source & Destination** components to facilitate reading and writing from HDFS.

Power BI

Includes Connection Manager, Source & Destination components to facilitate connecting to and reading and writing to/from Power BI.

Premium Data File

Use the Premium Data File component to read and retrieve data from an **Avro**, **ORC** or **Parquet** file.

Tableau Hyper

Includes **Connection Manager**, **Source**, **Destination** and **Publish Task** components to facilitate connecting to and reading and writing to/from Tableau Hyper.

Cloud Storage

Amazon S3 Storage

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting to and reading and writing from Amazon S3 Storage.

Amazon Blob Storage

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting to and reading and writing to/from Azure Blob Storage.

Azure Data Lake

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting to and reading and writing from Azure Data Lake Storage.

Azure Files

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting to and reading and writing to/from Azure Files.

Azure Files

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting to and reading and writing to/from Azure Files.

Box

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting, reading, & writing to/from Box.

Dropbox

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting, reading, & writing to/from Dropbox.

OneDrive

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting, reading, & writing to/from OneDrive.

OneLake

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting, reading, & writing to/from OneLake.

Conversion Components

Composition

Combine/merge multiple rows into one row based on the key field value.

Decomposition

Split the input values into multiple rows and duplicate the other columns' values as well.

Value Mapping

Use the Value Mapping component to manage translation of input values.

Data Generation and Anonymization

Data Anonymizer

Transformation component which allows you to anonymize or mask your sensitive data.

Data Spawner

Generates random sample data easily using many different data types.

JSON & XML Processing

JSON Source

Used to retrieve JSON documents from an HTTP URL or local file and break up the JSON structure to produce column data.

JSON Extract

A transformation component that receives JSON from an upstream component and extracts data to produce column data.

JSON Extract Task

Extracts data from JSON content and outputs it for use within the SSIS control flow.

JSON Merge

A transformation component which can be used to merge data into JSON documents.

JSON Destination

Merge input data into JSON structure and output it to a file or send it to an HTTP URL.

XML Source

Retrieve XML documents from an HTTP URL or a local file and break up the XML structure to produce column data.

XML Extract

A transformation component that receives JSON from an upstream component and extracts data to produce column data.

XML Extract Task

A transformation component that receives JSON from an upstream component and extracts data to produce column data.

XML Merge

A transformation component which can be used to merge data into XML format.

XML Destination

Merge input data into XML structure and output it to a file or send it to an HTTP URL.

HTML Table Source

Used to retrieve an HTML document from an HTTP request or a local file and extract a table element into column data.

Data Quality and Comparison

Address Parser

Extract the address details free form text.

Address Verification

Establish connections with various address verification services, verify the accuracy of address data and provide corrections.

Address Verification Connection Manager

Connects to address verification services to validate and standardize address data.

Data Profiler

Used to analyze data and to compare rows from upstream data sources. Results of the data analysis are sent to the additional "DataProfiler Output."

Diff Detector

Used to compare two source inputs to find out the exact differences. Rows are matched using a business key (single or composite key) to determine if the incoming rows are new, unchanged, changed, or deleted rows.

Duplicate Detector

Used to compare rows within a data source and identify duplicate rows. Offers several common matching types to handle unique requirements.

Data Warehousing

Amazon Redshift

Supports data integration via **Connection Manager**, **Source**, **Destination**, and **Command Task** for Redshift.

Databricks

Enables data movement and processing using **Connection Manager**, **Source**, **Destination**, and **Command Task**.

Google BigQuery

Executes BigQuery operations and SQL queries through the **Command Task** for large-scale analytics.

PostgreSQL

Facilitates PostgreSQL data flow using **Connection Manager**, **Source**, **Destination**, and **Command Task**.

PrestoDB

Allows querying and data transfers via **Connection Manager**, **Source**, **Destination**, and **Command Task**.

Snowflake

Manages Snowflake integration using **Connection Manager**, **Source**, **Destination**, and **Command Task**.

Google Services

Google Ads

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Ads.

Google AlloyDB

Includes a **Connection Manager**, **Source**, **Destination**, and **Command Task** to facilitate connecting to and retrieving data from and writing data to Google AlloyDB.

Google Analytics

Includes a **Connection Manager** and **Source** to facilitate connecting to and retrieving data from Google Analytics.

Google BigQuery

Includes a **Connection Manager**, **Source**, **Destination**, and **Command Task** to facilitate connecting to and retrieving data from and writing data to Google BigQuery.

Google Calendar

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Calendar.

Google Cloud Storage

Includes **Connection Manager**, **Source** & **Destination** components to facilitate connecting, reading, & writing to/from Google Cloud Storage.

Google Cloud SQL

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Cloud SQL.

Google Drive

Includes **Connection Manager**, **Source** & **Destination** components to facilitate connecting, reading, & writing to/from Google Drive.

Google Forms

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Forms.

Google Maps

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Maps.

Google People

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google People.

Google Search Console

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Search Console.

Google Sheets

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Sheets.

Google Tag Manager

Includes a **Connection Manager**, **Source**, and **Destination** to facilitate connecting to and retrieving data from and writing data to Google Tag Manager.

YouTube Analytics

Includes a **Connection Manager** and **Source** to facilitate connecting to and retrieving data from YouTube Analytics.

Template Merge

HTML Merge

A transformation component which can merge column and variable data using a pre-defined HTML template.

Text Merge

Data Flow Transformation Component which can merge column and variable data using a pre-defined text template.

Encryption and Compression Tasks

PGP Encryption Task

Control flow task that can be used to perform Encrypt, Decrypt, CreateSignature or VerifySignature actions on a file.

Compression Task

Allows you to compress or decompress .zip files in the Control Flow.

Premium Hash

An SSIS data flow transformation component that can be used to hash any input data.

Mail Components

Email Components

Includes **Connection Manager**, **Source** & **Destination** components to facilitate connecting to and retrieve emails from an IMAP, POP3, or Exchange Web Services Email server.

SMTP Components

SMTP **Connection Manager**, **Destination**, & **Task** facilitate connections to an SMTP server to send emails within SSIS.

Marketing Intelligence

Bing Ads

Includes a **Connection Manager**, **Source**, and **Destination** component for connecting to and retrieving data from Bing Ads.

Microsoft Advertising

Includes a **Connection Manager**, **Source**, and **Destination** component for connecting to and retrieving data from Microsoft Advertising.

Message Queue Components

ActiveMQ

Connection Manager, **Source** & **Destination** components facilitate connecting to and reading & writing to/from ActiveMQ.

Amazon SQS

Connection Manager, **Source** & **Destination** components facilitate connecting to and reading & writing to/from Amazon SQS.

Azure Queue Storage

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Azure Queue Storage.

AMQP

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from AMQP.

Azure Service Bus

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Azure Service Bus.

IBM MQ

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from IBM MQ/WebSphere MQ.

Kafka

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Kafka.

MSMQ

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from MSMQ.

MQTT

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from MQTT.

Premium Message Queue Task

Send or receive messages from message queues.

RabbitMQ

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from RabbitMQ.

SMPP

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from SMPP.

NoSQL Components

Amazon DynamoDB

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Amazon DynamoDB server. Supports Insert, Update, Upsert, or Delete write actions.

Apache Cassandra

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Apache Cassandra. Supports Insert, Update, Upsert, or Delete write actions.

Couchbase

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Couchbase.

CosmosDB

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from CosmosDB server. Supports Insert, Replace, Update or Delete write actions with the option to use Upsert to Replace and Update actions.

Firestore

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Firestore.

HBase

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from HBase.

MongoDB

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from MongoDB server. Supports Insert, Replace, Update or Delete write actions with the option to use Upsert on Replace and Update actions.

Redis

Connection Manager, Source & Destination components facilitate connecting to and reading & writing to/from Redis server.

Premium File Pack

FTPS Connection Manager

Facilitates connecting to an FTPS server.

SFTP Connection Manager

Facilitates connecting to an SFTP server.

SMB Connection Manager

Facilitates connecting to an SMB server.

Premium File System Components

Premium File System Source & Destination support reading or writing data from/to a file system through local, FTP, FTPS or SFTP connections. Includes item selection modes to retrieve the desired sub items.

Premium Flat File

- **Premium Flat File Source & Destination** support reading or writing data from/to a flat file from a specified server.
- Supports FTPS, SFTP, OneDrive, Dropbox, Box, Amazon S3, Azure Blob Storage, SharePoint & local connections.

Premium File Transfer Task

- Support for 4 actions: Send Files, Delete Files, Create Directory, and Remove Directory.
- Supports FTPS, SFTP, OneDrive, Dropbox, Box, Amazon S3, Azure Blob Storage, SharePoint & local connections.

WebDAV

Connection Manager, Source & Destination support reading, extracting, or writing data from/to a WebDAV instance.

HTTP/Web Service Components

AS2 Connection Manager

Web Service comes with an SSIS connection manager component that can be used to establish AS2 Connections.

HTTP Connection Manager

- Used to establish a connection to an HTTP website.
- Supports access to SOAP or REST-based web services.

HTTP Requester

- Data flow pipeline component that can be used to send a series of HTTP requests and process their responses.
- Support optional query string parameters.

HTTP Requester Task

- Control flow task component that can be used to send an HTTP request and receive a response.
- Supports optional query string parameters.
- Options to output the response body to a variable or file.

GraphQL

Includes **Connection Manager, Source & Destination** components to facilitate connecting to and reading and writing to/from GraphQL.

Microsoft Graph

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting to and reading and writing to/from Microsoft Graph.

Monday.com

Includes **Connection Manager**, **Source & Destination** components to facilitate connecting to and reading and writing to/from Monday.com.

Web Service

- Web Service **Source** supports reading data from virtually any SOAP based service endpoint. Option to specify input parameters. Support for custom SOAP headers.
- Web Service **Destination** supports writing data using web service interfaces by targeting virtually any SOAP based service endpoint. Supports custom SOAP headers.
- Web Service **Task** is a control flow component that can be used to read/retrieve data from a web service. Option to specify input parameters. Options to output the response body to a variable or file.

REST Components

The SSIS Integration Toolkit includes REST-based components that enable integration with a wide range of cloud services and SaaS platforms. These components provide **Connection Manager**, **Source**, and **Destination** capabilities for working with REST APIs.

Timing and Automation

Azure Functions

Execute Azure Functions using HTTP triggers and retrieve the response from the functions.

SSH Task

The SSH Task can be used to create an SSH Connection.

Time Zone Conversion

A transformation component for converting a date column from one timezone to another.

Timer Task

Pauses package execution between Control Flow items through 3 Pause Modes: Fixed Time, Wait Until, Wait Until Variable.

Window Command Task

Run Windows and PowerShell commands directly at the control flow level.

Test and Simulation

Dummy Destination

Works as a sink for SSIS by receiving incoming rows like a typical destination component, but it does not perform any actual writing.

Security Management Components

AWS Secrets Manager Components

Establish connections with AWS Secrets Manager and perform actions like get, update, delete, create, and restore on AWS Secrets.

Azure Key Vault Components

Establish connections with Azure Key Vault (Gen1 / Gen2) and perform actions like get, set, delete, and purge on Azure Secrets.

About KingswaySoft

KingswaySoft is a leading provider of data integration solutions for enterprise software. Organizations from more than 110 countries rely on our solutions to drive their business data efficiency.
