

# 2026 Release Wave 2

Expanded Connectivity and Continued Platform Enhancements

## OVERVIEW

KingswaySoft's 2026 Release Wave 2 brings together expanded connectivity, practical platform enhancements, and continued product refinements throughout our integration portfolio. With updates to the SSIS Integration Toolkit, JDBC Driver Pack, and Integration Gateway, this release helps organizations connect more applications, respond to changing platform requirements, and support critical data workflows in modern enterprise environments.

## RELEASE HIGHLIGHTS

- ✓ JDBC Driver Pack expands with support for 30 newly added API-driven services and platforms
- ✓ New SSIS connectivity added for Odoo, Temu, SendPulse and Enthuse
- ✓ Continued product refinements across SSIS, JDBC, and Integration Gateway to enhance platform compatibility and integration capabilities

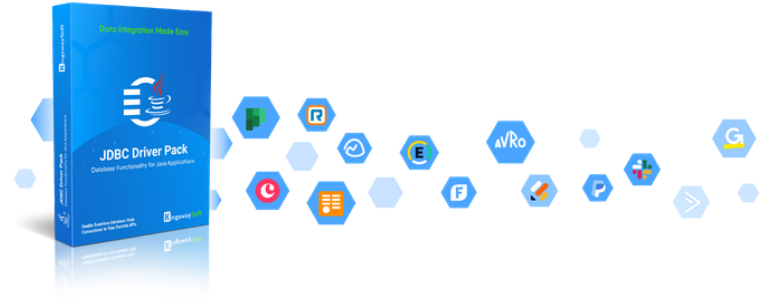

## ABOUT KINGSWAYSOFT

KingswaySoft is a leading provider of enterprise data integration solutions, serving organizations across more than 110 countries. Our portfolio includes SSIS-based integration components, JDBC-based connectivity solutions, and real-time integration capabilities, all designed to support modern data architectures. We are committed to continuous enhancement, delivering reliable and flexible solutions that help organizations streamline operations and achieve measurable results.

## JDBC DRIVER PACK EXPANSION

The JDBC Driver Pack expands with 30 newly added services and platforms, extending Java-based connectivity for API-driven systems. Key additions include SurveyMonkey, Microsoft To Do, PayPal, Quickbase, and Premium OData, along with structured data technologies such as Avro and Parquet.

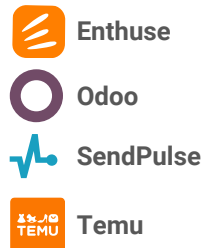

This release also includes targeted enhancements to existing JDBC drivers, including updated API 66.0 support for the JDBC Driver for Salesforce.

## SSIS INTEGRATION TOOLKIT ENHANCEMENTS

The SSIS Integration Toolkit continues to evolve with expanded connectivity options and platform enhancements designed to support modern enterprise integration requirements.

New connectivity support has been added for Enthuse, Odoo, SendPulse, and Temu, extending integration capabilities across fundraising, ERP, marketing automation, and eCommerce platforms. These additions further expand the range of systems organizations can incorporate into their ETL and data integration processes.

- The **Email Connection Manager** now supports **Exchange Online (Microsoft Graph)** connectivity, helping organizations prepare for Microsoft's retirement of Exchange Web Services (EWS).
- For **Microsoft Dynamics 365**, further enhancements to audit log integrations help clarify how the **Suppress General Service Exception** option can be used during audit data extraction, supporting better handling of service-related errors in Dynamics 365 integration scenarios.

## INTEGRATION GATEWAY REFINEMENTS

Integration Gateway continues to receive focused product refinements that support outbound SSIS package execution through real-time integration scenarios. These enhancements help improve execution consistency and support dependable data movement between connected systems.
